## M.Sc. Cyber Security

# Syllabus With effect from 2020-21

## **Program Code:**

#### DEPARTMENT OF COMPUTER APPLICATIONS

Bharathiar University
(A State University, Accredited with "A" Grade by NAAC and 13<sup>th</sup> Rank among Indian Universities by MHRD-NIRF)
Coimbatore 641 046, INDIA

#### BHARATHIAR UNIVERSITY, COIMBATORE-641 046 DEPARTMENT OF COMPUTER APPLICATIONS

## M.Sc. CYBER SECURITY 2020-2021 – (CBCS) University Dept. in collaboration with CSCC Labs (Effective from the academic Year 2020-2021)

#### 1. Eligibility for Admission

A pass in any Bachelors degree of minimum 3 years duration with Mathematics or Statistics as any one of the subjects at Graduate level.

#### 2. Duration

The programme shall be offered on a full-time basis for two years. The students will undergo the programme in Bharathiar University campus for the first three semesters and will undertake project work in the fourth semester.

#### 3. Regulations

The general Regulations of the Bharathiar University Choice Based Credit System Programme are applicable to these programmes.

#### 4. The Medium of Instruction and Examinations

The medium of instruction and Examinations shall be in English.

## 5. Submission of Record Notebooks for Practical Examinations & Project Viva-Voce.

Candidates taking the Practical Examinations should submit bonafide Record Note Books prescribed for the Examinations. Otherwise the candidates will not be permitted to take the Practical Examinations. Candidates taking the practice School / Project & Viva -Voce Examination should submit Project Report prescribed for the Examinations. Otherwise the candidates will not be permitted to take up the Project & Viva-voce Examination.

Students carry out Case Studies /Mini-projects and finishing school / major project and the schedule for review meetings are as given below:

Table: Schedule for Review Meetings

	First Review	Second Review
Case Studies / Mini Projects	Thursday of first week in June	Thursday of first week in August
Practice School / Major Project	Friday of first week of February	Friday of first week of April

#### 6. Ranking

A candidate who qualifies for the PG Degree Course passing all the Examinations in the first attempt, within the minimum period prescribed for the Course of Study from the date of admission to the Course and secures 1<sup>st</sup>or 2<sup>nd</sup>Class shall be eligible for

ranking and such ranking will be confined to 10% of the total number of candidates qualified in that particular subject to a maximum of 10 ranks.

#### 7. Revision of Regulations and Curriculum

The above Regulation and Scheme of Examinations will be in vogue without any change for a minimum period of three years from the date of approval of the Regulations. The University may revise/amend/ change the Regulations and Scheme of Examinations, if found necessary.

## BHARATHIAR UNIVERSITY:: COIMBATORE 641046 DEPARTMENT OF COMPUTER APPLICATIONS

#### **MISSION**

- To impart practical knowledge and professional skills in the area of computer applications to students to make them industry ready.
- To contribute to the advancement of knowledge in the field of Computer Applications through research.
- To involve the students in societal contributions to make them aware of the society and its needs.

Program 1	Educational Objectives (PEOs)
The <b>M.Sc.</b>	Cyber Security program describe accomplishments that graduates are expected
to attain w	thin five to seven years after graduation
PEO1	To equip with the technical knowledge and skills needed to protect and defend computer systems and networks
PEO2	To assimilate and use state of the art computing technologies, tools and techniques necessary to provide security to the computing platforms.
PEO3	To equip with skill to design a system, component, or process to meet desired needs within realistic constraints such as economic, environmental, social and ethical contexts.
PEO4	To develop graduates that can identify, analyze, and remediate computer security breaches.
PEO5	To prepare, report and effectively communicate with the stakeholders about Information security process, standards and controls.
PEO6	To practice managing security relevant projects and function effectively in cyber space as an individual, and as a member or leader in diverse teams.
PEO7	To plan, implement, and monitor cyber security mechanisms to help ensure the protection of information technology assets.
PEO8	To appeal self-learning for continual development as a cyber professional for the betterment of individuals, organizations, research community and society.
PEO9	To select suitable ethical principles and commit to professional responsibilities and human values and also contribute value and wealth for the benefit of the society.
PEO10	To systematically educate the necessity to understand the impact of cyber crimes and threats with solutions in a global and societal context

Program Specific Outcomes (PSOs)							
After the	successful completion of M.Sc. Cyber Security program, the students are						
expected t	expected to						
PSO1	To understand the cyber space and frame the foundations of security principles, enterprise and models to suit the needs of the industry.						
PSO2	To select and operate the cloud infrastructure and enterprise system based on the security and storage needs.						
PSO3	To ensure the credibility of the information systems by managing the security standards and protocols.						
PSO4	To enumerate system vulnerability and provide solutions for vulnerabilities and other potential threats.						
PSO5	To code and execute python programming with a higher level of expertise.						
PSO6	To develop and assist in designing security software architecture and testing its credibility against threats.						
PSO7	To understand and carry out the digital forensics process for evidence collection under investigative techniques.						
PSO8	To develop basic understandings of IoT structures and develop familiarity with basic security attacks and its measures.						
PSO9	To develop a deeper understanding and familiarity with various types of cyber attacks and vulnerable frames to tackle them.						
PSO10	To raise skill in dealing with advanced web technologies allied with complex and sophisticated IT infrastructure.						

Program	Program Outcomes (POs)					
On succe	On successful completion of the M. Sc. Cyber Security program					
PO1	Analyze and evaluate the cyber security needs of an organization					
PO2	Conduct a cyber security risk assessment					
PO3	Perform Network and Application Vulnerability Assessment					
PO4	Implement sustainable cyber security solutions for various cyber threats as per					
PO4	business requirements.					
PO5	Articulated reporting and effective communication with the stakeholders, about					
103	security process, standards and controls.					
PO6	Spear head and run cyber security relevant projects and function effectively in					
100	cyber space as an individual, and as a member or leader in diverse teams.					
PO7	Design and Develop secure architecture for an organization					
PO8	Habit of self-learning for continual development as a cyber professional for the					
100	betterment of individuals, organizations, research community and society.					
	Implementation of ethical principles and commit to professional responsibilities					
PO9	and human values and also contribute value and wealth for the benefit of the					
	society.					
PO10	Evaluate the impact of cyber crimes and threats in a global and societal context.					

#### M.Sc. CYBER SECURITY 2020 - 2021 Univ.Dept. in collaboration with CSCC Lab (Effective from the academic Year 2020-2021)

Core/Elective/Supportive	Core	4	0	0	4
Pre-requisite	Network Basics and Cryptography Basics	Sylla s Versi		202 202	

#### **Course Objectives:**

The main objectives of this course are to:

- 1. To understand the basics of network security, and reference models
- 2. To understand the types protocols and its usage
- 3. To discuss about the network security attacks and network security assessment
- 4. To know about assessment of network security and remote Information Services
- 5. To understand the security techniques used in cryptography

#### **Expected Course Outcomes:**

On the successful completion of the course, student will be able to:

1	Learn basics of computer networks and hardware	K1,K2
2	Explain the Reference Models (OSI and TCP/IP)	K2,K4
3	Understand network security and identify protocols	K2,K4
4	Illustrate the security attacks	K4,K5
5	Explain Network Security Assessment and RIS and Demonstrate about Cryptography algorithms	K2, K3, K5

K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create

Unit:1	Introduction to Computer Networks and	12 hours
	ReferenceModels	

Overview of Computer Networks: Introduction – Business and Home Applications – Mobile Users – Social Applications. Network Hardware: PAN – LAN – MAN – WAN. Reference Models: OSI – TCP/IP - Comparisons of OSI and TCP/IP. Example Networks: Internet – Arpanet – NSFNET – Mobile Phone Networks – Wireless LAN – RFID and Sensor Networks.

#### Unit:2 Protocols Types and Usage 10 hours

**Protocols:** Network Security Technologies and Protocols -TCP/IP- VOIP - WAN - LAN - MAN- SAN - ISO Protocols in OSI -other protocols. **Internet Security:** Network Access Control and Cloud Security - Transport Level Security - Wireless Network Security - Email Security - IP Security - Remote User Authentication. **Firewalls:** Need - Characteristics - Types - Basing - Location and Configuration.

Security attacks	14 hours
Í	f Security attacks

**Security Attacks:** Challenges of Securing Information – Threat Actors – Defending against Attacks. Attacking using Malware – Social Engineering Attacks.Basic Cryptography – Cryptography Algorithms – Cryptographic Attacks. Networking based attacks - Server Attacks. Wireless Network Security Attacks and solutions. Types of mobile devices – mobile device risks – securing mobile devices – embedded systems and Internet of Things.

## Unit:4 Assessment of Network security and Remote 12 hours Information Services

**Network Security Assessment:** Assessment Standards – Network Security Assessment and Platform. Assessing IP VPN Services: IPsec VPNs – Attacking IPsec VPNs. **Assessing Remote Information Services:** Remote Information Services – DNS – Finger – Auth – NTP – SNMP – LDAP – rwho – RPC rusers – Remote Information Services Countermeasures.

#### Unit:5 Basics of Cryptography Algorithms 12 hours

Overview of Cryptography: Computer Security Concepts – OSI Security Architecture – Security Attacks – Security Services – Security Mechanisms. Symmetric Ciphers: Traditional Block Cipher Structure – DES – AES. Asymmetric Ciphers: Public Key Cryptography and RSA. Hash Functions: – SHA – SHA 3. Message Authentication: Requirements – Functions – codes - CCM and GCM. Digital Signatures and Scheme: (EDSS & SDSS) - Algorithms - NIST – ECDS – RSA-PSS.

Unit:6	Contemporary Issues	2 hours

Pre-r	equisite	<b>Understanding of Programming Concepts</b>	Sylla Vers			-

#### **Course Objectives:**

The main objectives of this course are:

- 1. To understand the basics of Python and Ethical Hacking from Scratch.
- 2. To strengthen fundamental skills in Network Communication.

#### **Expected Course Outcomes:**

On the successful completion of the course, student will be able to:

1	To describe the environment setup and program basics.	K1
2	To understand the Python data structures and data types.	K2
3	To demonstrate modular programming and to explain network concepts	K1/K3
4	To design working environment of virtual environment and understand	K3/K4
	various library in python	
5	To understand testing methods and analyze the use cases with suitable	K5/K6
	techniques.	

K1-Apply; K2 - Understand; K3 - Setup; K4 - Analyze; K5 - Evaluate; K6 - Create

### Unit:1 Python – An Overview 15 hours

#### Unit I

Python – Introduction – History of Python – Python Features – Python Interpreter – Installation and Setup: Windows – Linux – macOS – Installing/Updating Python Packages – Essential Python Libraries - Basic Data Types – Python Built-in Functions – IDEs – Text Editors –IPython – Jupyter Notebook - Importing and Exporting Files: CSV File – JSON File – txt File- Excel File – Xml File – Delimited Formats.

Unit:2Python Data Structure20 hoursData Structures: Introduction - NumPy Package - Python List: Introduction - Accessing

values—List Manipulation — List Operations - Python Tuples: Creating Tuples - Operation in Tuples — Accessing and Functions in Tuples — Python Dictionary: Accessing — Functions in Dictionary — Functions — Namespaces - Indexing — Slicing — Matrices — Arrays — Functions — Exception Handling -Global and Local Variables.

Unit:3 Modular Programming 15 hours

 $\label{eq:continuous_series} \begin{tabular}{l} Modular Programming - TCP Server- Client - UDP Server- Client - HTTP Server- Retrieving hostname IP - Banner grabbing - Socket Server Framework - Scapy: Syn Flood attack Scapy - Ping Sweep - Sniffing with Scapy - Buffer Overflow - exploit writing. \\ \end{tabular}$ 

Unit:4 Python Environment Setup 20 hours

**Python Environment Setup** - Introduction -Virtual Environment - Setting Up Virtual Box - Setting Up VMWare -Kali Linux Installation - Installation Visual Studio Code - IRC Client Installation.**Networking Setup:** Introduction - Basic Socket Library - Urllib Library: Access

URL Resources/Download Files – ftplib Library: Develop an FTP Client - smtplib Library: SMTP Client - Paramiko Library: Interactive SSH Shell

Unit:5 Penetration Testing 20 hours

Penetration Test Introduction – Categories – Pentesting Process – Use Cases: Developing Ethical Hacking Tools: Automating Information Gathering – Keylogger – Bruteforcing ZIP Passwords.

Unit:6 Contemporary Issues 2 hours

#### Write an Assignment on any of the following:

- 1. Complete any one Online Courses related to Python and Cybersecurity.
- 2. Elaborate any one Password Encryption Tool using Python.

Total Lecture hours 92 hours

Course code	20CSESC05 SOFT SKILLS L T							
	ive/Supportive	Core	2		2	4		
	requisite	TRIINGAMENTAIS IN RUGIISH SHEARING ANG WRITING T	•	bus sion				
Course C	bjectives:							
The main	objectives of thi	s course are to:						
1. To un	derstand the basi	ics of communication skills						
2. To Ur	nderstand the log	ical skills						
3. To de	velop interpersor	nal skills						
	prove the writing							
		e in technical programming						
6. To ac	quired knowledg	e in technical programming and quantitative aptitude						
Expected	Course Outcom	mes:						
On the su	ccessful complet	ion of the course, student will be able to:						
	relop the basics oncy through activ	of communication skills and Develop confidence, clarity ve involvement	y,		K2			
2 Incr	ease logical skill	ls, analytical skills and apply in software applications			K2			
3 Develop interpersonal skills, listening through (seminar, self intro, stage speaking)

**Quantitative Aptitude 2** 

10 hours

Unit:5

Simple Interest – Compound Interest – T	ime and Work – Time and Distance.

#### Unit:6 **Contemporary Issues** 2 hours

Write an assignment on any one of the following:

- 1. Traits needed for a software Engineer.
- 2. Traits needed for a software project Manager.
- 3. Traits needed for a Teacher (Software Tester).

		Total Lecture hours	62 hours

Core/Elective/Supportive		Core	4			4
Pre-requisite		Operating Systems and Computer Networks	Syllabus Version		202 202	-

#### **Course Objectives:**

The main objectives of this course are to:

- 1. To understand the concepts and vocabulary of digital forensics and understand how computers create and store digital information is a perquisite for the study of digital forensics.
- 2. To understand what tools exist for use when performing Digital Forensics and how the digital evidence is handled will play a major role in getting that evidence admitted into court.
- 3. To understand the system artifacts and anti forensics concepts.
- 4. To understand the legal aspect of digital forensics.
- 5. To understand the network and mobile device forensics.

#### **Expected Course Outcomes:**

On the successful completion of the course, student will be able to:

01	the successful completion of the course, student will be use to.				
1	Understand the concepts and vocabulary of digital forensics.	K2			
2	2 Understand what tools exist for use when performing Digital Forensics and				
	How the digital evidence is handled will play a major role in getting that				
	evidence admitted into court.				
3	Understand the system artifacts and anti forensics concepts	K2			
4	Examines the reasonable expectations of privacy, private searches, searching	K2			
	with and without a warrant.				
5	To understand the network and mobile device forensics.	K2			

K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create

#### Unit:1 Digital Forensics 12 hours

Introduction – Uses of Digital Forensics – Organizations of Note – Locard's Exchange Principles – Scientific Method. Key Technical Concepts: Bits, Bytes and Numbering Schemes – File Extensions and File Signatures – Storage and Memory – Computing Environments – Data Types – File Types – Allocated and Unallocated Space.

#### Unit:2 Evidence Collection, Labs and Tools 12 hours

Labs and Tools: Introduction – Forensic Laboratories - Policies and Procedures – Quality Assurance – Digital Forensic Tools – Accreditation. Collecting Evidence: Crime Scenes And Collecting Evidence - Documenting The Scene - Chain Of Custody – Cloning – Live System Versus Dead System – Hashing – Final Report.

Unit:3	System Artifacts, Anti Forensics	12 hours

System Artifacts: Deleted Data - Hibernation File - Registry - Print Spooling Recycle Bin - Metadata - Restore Points And Shadow Copy - Link Files. Anti Forensics: Introduction -

#### Hiding Data – Password Attacks – Data Destruction. Unit:4 Legal Aspect, Internet and E-Mail 12 hours Legal Aspect: Criminal Law-Searches Without a Warrant – Search with a Warrant – Electronic Discovery - Internet and E-mail: Internet Overview - Web Browsers - EMail - Social Networking Sites. **Network and Device Forensics** Unit:5 12 hours Network Fundamentals – Network Security Tools – Network Fundamentals – Incident Responses – Network Evidence and Investigations – Mobile Cellular Networks – Operating Systems – Cell Phone Evidence - Cell Phone forensic tools - Global Positioning Systems. Challenges and Concerns: Standards And Controls - Cloud Forensics - Solid State Drives. Unit:6 **Contemporary Issues** 2 hours Write an assignment on any one of the following: 1. Legal and privacy issues in computer forensics 2. Open and Proprietary tools for Digital Forensics **Total Lecture hours** 62 hours Text Book(s) John Sammons, "The Basics of Digital Forensics, The Primer for Getting Started in Digital Forensics", Syngress, 2012. Tony Sammes, Brian Jenkinson, "Forensic Computing", Second edition, Springer, 2007. **Reference Books** Cory Altheide and Harlan Carvey, "Digital Forensics with Open Source Tools", Elsevier, 2011. Core/Elective/Supportive		Core		0	0	4
Pre-re	eanisite	Computer Networks, Architecture and OWASP Concepts	Sylla Vers		202 202	

#### **Course Objectives:**

The main objectives of this course are to:

- 1. To understand the basics of mobile computing, Principles and Techniques.
- 2. To discuss the Introduction of IoT, Architecture and Participatory Sensing.
- 3. To understand the basics of mobile security techniques

#### **Expected Course Outcomes:**

On the successful completion of the course, student will be able to:

0.	if the successful completion of the course, student will be use to.	
1	Learn basics of mobile computing principles and techniques	K1,K2
2	Understand middleware and proposed applications	K2
3	Explain the IoT Standard and Reference Architecture.	K2,K4
4	Illustrate the mobile security and prevention techniques	K1,K4
5	Explain Commercial Building Automation and Demonstrate simple building automation	K2, K3, K6

K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create

#### Unit:1 Introduction to Mobile Computing 18 hours

Mobile Computing: Introduction – Adaptability – Mechanisms for Adaptation – Develop or Incorporate Adaptations – Support for Building Adaptive Mobile Applications. Mobility Management: Location Management Principles and Techniques. Data Dissemination and Management: Challenges - Data Dissemination - Data Caching - Cache maintenance Schemes - Web Caching.

#### Unit:2 Mobile middleware and Networking Challenges 18 hours

Mobile Middleware: Introduction - Adaptation - Agents - Service Discovery. Ad Hoc and Sensor Networks: Properties of an Ad Hoc Network - Unique Features of Sensor Networks - Proposed Applications. Challenges: Constrained Resources - Security - Mobility. Approaches and Solutions: Deployment and Configuration - Routing - Fault Tolerance and Reliability - Energy Efficiency.

Unit:3	Mobile and IoT	18 hours

Introduction - From M2M to IoT - M2M towards IoT the global context. An Architectural Overview: Building an Architecture - Main design Principles and Needed Capabilities - An IoT Architecture Outline. Standards Considerations. IoT Architecture: Introduction - State of the Art.

Unit:4	IoT Reference Architecture Views	18 hours
--------	----------------------------------	----------

IoT Reference Architecture: Introduction - Functional View - Information View - Deployment and Operational View - Other Relevant Architectural Views. Participatory Sensing: Introduction - Roles, Actors, Engagement - Participatory Sensing Process - Technology Overview - An early Scenario - Recent Trends - A modern Example.

#### Unit:5 Mobile communication and Security 18 hours

Mobile Security: Overview of Mobile Communication: Introduction - Basics of Mobile Communications - Wireless Vulnerabilities and Threats - Attacks in Mobile Environments - Mobile Malware - Prevention Techniques in Mobile Systems - Intrusion Detection in Wireless Communications.

Unit:6	Contemporary Issues	2 hours

Study: Commercial Building Automation: Phase one - Phase Two.

Total Lecture hours 92 hours

#### Text Book(s)

- Fundamentals of Mobile and Pervasive Computing, Golden G. Richard III, Frank Adelstein, Sandeep K. S. Gupta, Loren Schweibert, McGraw-Hill 2005

Unit:1 Introduction to Penetration Testing 18-- hours

Introduction – Preparation and Creating a Penetration Testing Lab – The use and creation of hacking lab – Setting up Virtual Lab – Using Kali Linux – Programming – Using the Metasploit framework – Phases of Penetration test Reconnaissance – Scanning – Exploitation – Maintaining Access – Web based Exploitation – Maintaining Access with backdoors and rootkits.

Unit:2 Information Gathering and Vulnerabilities 18-- hours

Netcraft – Whois LookUp – DNS Reconnaissance – Searching for Email Addresses - Maltego. **Host and Network Scanning:** Manual port scanning – Port scanning with Nmap. Nessus policies – Exporting Nessus results – Researching Vulnerabilities – The Nmap Scripting Engines – Metasploit Scanner Modules.

Unit:3	Wires and Wireless Attacks	18 hours
	· · · - · · · · · · · · · · · · · · · ·	

Exploitation – Metasploit payloads – Running a script on the target web server – Password attacks – Client side exploitation – HTTP and HTTPS Payloads – Wireless

attacks: Viewing and scanning for available access points – Capturing packets – Wired equivalent privacy – WiFi Protected access – WPA2 – The Enterprise Connection Process – The personal connection process – WiFi protected setup.

Social Engineering	18 hours
	Social Engineering

The Social Engineering toolkit – Spear Phishing attacks – choosing a payload – creating a template – single or mass mail – setting up target and listener – web attacks – Mass email attacks – Multipronged attacks

#### Unit:5 Web Application Vulnerabilities 18-- hours

Using burp proxy – SQL Injection – Testing for SQL Injection vulnerabilities – Exploiting using SQLMap – Xpath Injection – Local and Remote file Inclusion – Cross-Site Scripting – Checking for reflected XSS Vulnerability – Web application scanning with w3af.

Unit:6	Contemporary Issues	2 hours
--------	---------------------	---------

The stage of risk, Data Asset, Affect the confidentiality, Integrity – Destruction – Disclosure – Modification – Corruption of Data – Viruses and Malwares – Cyber Attacks – Misconfiguration – Risk Assessment.

Total Lecture hours
---------------------

Core/Electi	ve/Supportive	Core	4			4
Pre-r	equisite	Basic knowledge of Policy, Process, Standard, Procedure and Compliance	Syllabi Versio		202 202	

The main objectives of this course are to:

- 1. To understand the risk management process for all organizations.
- 2. To understand the security standards, compliance, security controls and access controls.
- 3. To learn what PCI DSS is and understand how it applies to the organizations.
- 4. To understand the technologies referenced by PCI DSS
- **5.** To understand how to building and maintaining a Secure Network.

## **Expected Course Outcomes:**

On the successful completion of the course, student will be able to:

OII	on the successful completion of the course, student will be use to.						
1	Understand the risk management process for all organizations	K2					
2	Understand the security standards, security controls and control libraries.	K2					
3	Understand what PCI DSS is and understand how it applies to the organizations.	K2					
4	Understand how to building and maintaining a Secure Network	K2, K3					
5	Develop a case study for organization using PCI DSS.	K3					

K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create

# Unit:1 Security Risk Management 14 hours

Organizational Security Risk Management: Risk is Inevitable – Strategic Governance and Risk Management – Elements of Risk Management – Risk Types and Risk Handling Strategies – Overview of the Risk Management Process. Existing Risk Management Frameworks: Standard Best Practice –Risk Management Tangible – Formal Architecture – General Shape of the RMF Process – RMF Implementation – Other Frameworks and Models for Risk Management – International Organization for Standardization – NIST SP 800-30 and NIST SP 800-39 Standards.

## Unit:2 Security Controls and Control Library 12 hours

Select Security Controls: Understanding Control Selection - Federal Information Processing Standard Publication 200 – Document Collection and Relationship Building - Control Libraries: Control Objectives for Information and Related Technologies – CIS Critical Security Controls – Industrial Automation and Control Systems Security Life Cycle – ISO/IEC 27001.

Unit:3	Unit:3 Payment Card Industry Data Security Standard (PCI DSS)						
	ction – Electronic Card Payment Ecosystem – Compliance Dead and Validation – History of PCI DSS – PCI Council – QSAs, P						
ASVs – PCI	ASVs – PCI Requirements – PCI DSS and Risk – Benefits of Compliance – Case Study.						
Unit:4	PCO Scope and Secure Network	10 hours					

Determining and Reducing the PCI Scope: Basics – Scope Reduction Tips – Planning PCI

Project. Building and Maintaining a Secure Network: Establishing Firewall Configuration Standards – Tools and Best Practices – Common Mistakes and Pitfalls – Case Study.

Unit:5 Strong Access Controls

12 hours

Principles of Access Control – Limitations of User Access – Authentication Basics – Windows and PCI Compliance – POSIX Access Control – CISCO and PCI Requirements – CISCO Enforce Session Timeout – Physical Security – Random Password for Users – Common Mistakes and Pitfalls – Case Study.

Unit:6 Contemporary Issues

2 hours

Write an assignment on any one of the following:

- 1. PCI Council
- 2. Building Secure Network

62 hours

Networking: Introduction to Networking & Communication Protocols | 10 hours

Networking: Introduction to Corporate Infrastructure – LAN, MAN and WAN. Internet of

Things: Introduction – Definition Evolution – IoT Architecture – Resource Management – IoT

Data Management and Analytics – Communication Protocols – Identity Management and

Authentication – Privacy. Device Collaboration Framework.

Fog Computing
Unit:2 14 hours

**Fog Computing:** Introduction – Characteristics – Reference Architecture – Applications – Research Directions and Enables – Commercial Products. **Stream Processing in IoT:** Foundation of Stream Processing in IoT – Continuous Logic Processing System – Challenges and Future Direction.

Cloud Computing Influences
Unit:3 12 hours

**Cloud Computing**: Introduction – Characteristics – Architectural Influences – Technological Influences – Operational Influences. **Cloud Computing Architecture**: Delivery Model – Deployment Model – Benefits. Cloud Security Services.

Unit:4Virtualization & Data Center12 hoursCloud, Virtualization, and Data Storage& Data Center Networking Fundamentals:

Server and Storage I/O Fundamentals – I/O Connectivity and Networking Fundamentals – IT Clouds – Virtualization: Servers, Storage and Networking – Virtualization and Storage Services – Data and Storage Access. **Infrastructure Resource Management:** Introduction - Managing

Data Infrastructure for Cloud Virtual Environments – Understanding IT Resources – Managing IT Resources

## Unit:5 Security Threats and Risks 12 hours

**Data and Storage Networking Security:** Security Threat Risks and Challenges – Securing Networks – Securing Storage – Securing Clouds. **Data Protection:** Data Protection Challenges and Opportunities – Protect, Preserve, and Serve Information Services – Virtual – Physical, and Cloud Data Protection – Modernizing and Protection and Backup.

Unit:6	Contemporary Issues	2 hours
Internet of R		

Total Lecture hours 62 hours

Core/Elective/S	Supportive	Elective	4			4
Pre-requisite		Operating System, Basics of Malware, Security Concepts and Algorithms	Syllabus Version		202( 202	

The main objectives of this course are to:

- 1. To understand the nature of malware, its capabilities, and how it is combated through detection and classification.
- 2. To able apply the tools and methodologies used to perform static and dynamic analysis on unknown executable.
- 3. To understand the social, economic, and historical context in which malware occurs.
- 4. To be able to apply techniques and concepts to unpack, extract, decrypt, or bypass ne anti-analysis techniques in future malware samples.

## **Expected Course Outcomes:**

On the successful completion of the course, student will be able to:

_	r	
1	Understand the nature of malware, its capabilities, and how it is combated	K2
	through detection and classification.	
2	Understand the social, economic, and historical context in which malware	K
	occurs.	2
3	Analyze malicious in windows programs.	K
		4
4	Apply the tools and methodologies used to perform static and dynamic analysis	K
	on unknown executable.	3
5	Apply techniques and concepts to unpack, extract, decrypt, or bypass new anti-	K
	analysis techniques in future malware samples.	3

K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create

Unit:1 Malware Analysis Overview 12 hours

Introduction: Definition of Malware – Goals of .Malware Analysis – Malware Analysis – Techniques - Types of Malware Analysis – General Rules for Malware Analysis. Analyzing malicious windows programs: Windows API – Windows Registry – Networking APIs – Following Running Malwares – Kernel vs User Mode- Native API.

Unit:2 Basic Analysis 14 hours

Basic Static Techniques – Antivirus Scanning – Hashing – Finding Strings – Packed and Obfuscated Malware – Portable Executable File Format – Linked Libraries and Function – Static Analysis in Practice – PE File Headers and Sections. Basic Dynamic Analysis: Quality and Dirty Approach – Running Malware – Monitoring with Process Monitor – Viewing Process with Process Explorer: The Process Explorer Display, Using the Verify Option, Comparing Strings, Using Dependency Walker, Analyzing Malicious Documents – Comparing Registry Snapshots with Regshot – Faking a Network – Packet Sniffing with Wireshark – Using INetSim

# Basic Dynamic Tools in Practice. Unit:3 **Advanced Analysis** 10 hours x86 Architecture: Memory, instructions, opcodes, operands, registers, functions, stack. IDA Pro Inference – Cross Reference – Analyzing Functions – Using Graphing Options – Enhancing Disassembly – Extending IDA with Plug-ins. Unit:4 **Advanced Dynamic Analysis** 12 hours Source-Level vs Assembly Level Debuggers -Kernel vs User-Mode Debugging - Using Debugger – Exceptions – Modifying Execution with a Debugger. OllyDbg: Loading Malware – OllyDbg Interface – Memory MapViewing Threads and Stacks – Executing Code – Breakpoints - Loading DLLs - Tracing - Exception Handling - Patching - Analyzing Shellcode - Assistance Features – Plug-ins – Scriptable Debugging. Using WinDbg – Microsoft Symbols. Unit:5 **Anti-Disassembly and Anti-Debugging** 12 hours Anti-Disassembly: Understanding Anti-Disassembly – Defeating Disassembly Algorithm – Anti-Disassembly Techniques – Obscuring Flow Control – Thwarting Stack-Frame Analysis. Anti-Debugging: Windows Debugger Detection – Identifying Debugger Behaviour – Interfering with Debugger Functionality – Debugger Vulnerabilities. Defeat Malware. Unit:6 **Contemporary Issues** 2 hours Write an assignment on any one of the following: 1. Malware Analysis Tools 2. Malicious in Windows Programs. **Total Lecture hours** 62 hours Text Book(s) Michael Sikorski, Andrew Honig, "Practical Malware Analysis", No Strach Press, 2012. Michael Hale Ligh, Steven Adair, Blake Hartstein, Matthew Richard "Malware Analyst's Cookbook and DVD: Tools and Techniques for Fighting Malicious Code", Wiley Publishing Inc, 2011. Course code 20CSESE05	Cyber Law	L	T	P	C
Core/Elective/Supportive	Core	4	0	0	4
Pre-requisite	IPC, IT ACT and Criminal ACT	Syllabus Version	202	0-20	)21

The main objectives of this course are to:

- 1. Understand the basics of Cyber Crime.
- 2. Discuss International Law and Regulation of Cyberspace and Human Rights.
- 3. Understand the Cyber Security Policy of India.

## **Expected Course Outcomes:**

On the successful completion of the course, student will be able to:

1	Understand Basics of Cyber Crime	K
		2
2	Understand International Law and Regulation of Cyberspace and Human Rights	K
		2
3	Legal Issues of Intercepting WiFi Transmissions	K
		4
4	Conducting Cyber Investigation	K
		4
5	A model case study "Live versus Post-mortem"	K
		3

## K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6- Create

Unit:1 Basics of Cybercrime 12 hours

Cyber Criminology and Psychology: Introduction – Cyberbullying, cyber –Harassment and Cyberstalking – Revenge Pornography, Sexting, Sextortion and Related Offences - Tackling Offensive Online Communications and Abuse. Why Cybercrime Occurs: Introduction - Rational Choice Theories: Deterrence Theory and Routine Activity Theory - Self-Control Theory - General Strain Theory - Social Learning Theory and Related Concepts - Subcultural Theories.

## Unit:2 Human Rights and International Law 10 hours

Introduction: Perspectives of Various Stakeholders and Challenges for International Law: Perspectives of Stakeholders - General Introduction to Public International Law - Jurisdiction and Attribution of State Responsibility in Cyberspace: Jurisdiction - Attribution of State Responsibility. Regulation of Cyberspace and Human Rights: General Background - Human Rights in Cyberspace – Exceptions - Territorial Scope of Human Rights Protection.

Unit:3 Cybercrime Roles 14 hours

Cyber Investigative Roles - Understanding Your Role as a Cyber Crime Investigator - The Role of Law Enforcement Officers - The Role of the Prosecuting Attorney. Incident Response: Live Forensics and Investigations - Post-mortem versus Live Forensics - Today's Live Methods. Legal Issues of Intercepting WiFi Transmissions: WiFi Technology - Understanding WiFi RF - Scanning RF - Eavesdropping on WiFi - Fourth Amendment Expectation of Privacy in WLANs.

### Unit:4 Cybercrime investigations 12 hours

Conducting Cyber Investigations: Demystifying Computer/Cyber Crime - Understanding IP Addresses - The Explosion of Networking - The Explosion of Wireless Networks - Interpersonal Communication. Digital Forensics and Analyzing Data: The Evolution of Computer Forensics -

Phases of Dig	gital Forensics – Examination – Analysis – Reporting.	
Unit:5	Cyber Security Policy in India	12 hours
Cyber Sec	eurity Policy in India-2013 – Cyber Hacking – Cyber Frau	d – Cyber Crime:

Cyber Security Policy in India-2013 – Cyber Hacking – Cyber Fraud – Cyber Crime: Introduction – Against Economy – Preventive steps for organizations and Government – Problems Related with Cyber Crime – Indian Case studies – Types of Cyber Crime – Threat Perceptions – tools Used for Cyber Crime – Other Cyber Crime Methods – Connection between Terrorism and Cyber Crime. Cyber Crime and Punishment.

Unit:6	Contemporary Issues	2 hours

Case Study:Live versus Post-mortem

Course code	20CSESE06	ARTIFICIAL INTELLIGENCE AND MACHINE LEARNING	L	Т	P	С	
Core/Elective/Supportive		Elective	4			4	
Pre-requisite		<b>Basics of Mathematical Probabilities and</b>		Syllabus		2020-	
		Computer Programming	Version		2021		

- 1. To articulate key problems, both technical and philosophical, in the development of artificial intelligence
- 2. To apply the machine learning algorithms for various applications.
- 3. To understand the Concepts of Machine learning algorithms of different probabilistic, rE

# **Expected Course Outcomes:**

CO1	Understand and Apply AI technique in the development of problem- solving and learning systems	K1
CO2	Understand the problems where artificial intelligence techniques are applicable	K2
CO3	Apply the concepts of machine learning	K2
CO4	Understand the theoretical concepts of probabilistic and linear methods	K4
CO5	Distinguish Supervised, Unsupervised and semi supervised learning	K4, K3 ,K5

<b>K1</b> - Remember; <b>K2</b> - Understand; <b>K3</b> - Apply; <b>K4</b> - Analyze; <b>K5</b> - Evaluate; <b>K6</b> -									
Create	Create								
Unit:1	Artificial Intelligence	<b>12</b> hours							
Introduction	Introduction to Artificial Intelligence - Intelligent Agents - Problem solving -								
	blems by searching – search in complex environments – Adv	ersarial Search							
and Games	<ul> <li>Constraints Satisfaction Problems</li> </ul>								
Unit:2	Knowledge, reasoning and planning	12 hours							
Logical A	gents – First –Order Logic – Inference in First –Order Logic	c – Knowledge							
-	ion – Automated Planning – Uncertain knowledge and	•							
	g Uncertainty – Probabilistic Reasoning – Probabilistic P	rogramming –							
Multi Agen	Multi Agent Decision Making								
Unit:3	Machine Learning	12 hours							
Machine I	earning Foundations –Overview – applications - Types of ma	achine learning							
- basic con	cepts in machine learning Examples of Machine Learning -	-Applications -							
Linear Mod	dels for Regression - Linear Basis Function Models - The	Bias-Variance							
Decomposi	tion - Bayesian Linear Regression - Bayesian Model Compari	ison							
Unit:4	Models for Classification	12 hours							
Supervised	l Learning Linear Models for Classification - Discrimina	nt Functions -							

	Probabilistic Generative Models - Probabilistic Discriminative MacLogistic Regression. Decision Trees - Classification Trees - Regression Neural Networks - Feed-forward Network Functions - Error BacRegularization - Mixture Density and Bayesian Neural Networks - Dual Representations - Radial Basis Function Networks. Support Sensemble methods - Bagging Boosting - Evaluation Methods	on Trees - Pruning.  ack propagation -  Kernel Methods -						
	Unit:5 Clustering	12 hours						
;	Unsupervised Learning Clustering- K-means - EM - Mixtures of G Algorithm in General - Model selection for latent variable models spaces The Curse of Dimensionality - Dimensionality Reduction Principal Component Analysis - Probabilistic PCA- Independent com	aussians - The EM - high-dimensional - Factor analysis -						
	Unit:6 Contemporary Issues	2 hours						
	Ethical Considerations in Machine Learning Applications – Ethics a AI and ML as disruptive technology Use cases – Webinars							
	Total Lecture hours	62 hours
